

Web Design

What is website design?

Website design is the process of **creating the look, layout, and overall feel of a website**. It focuses on how a website appears and how users interact with it.

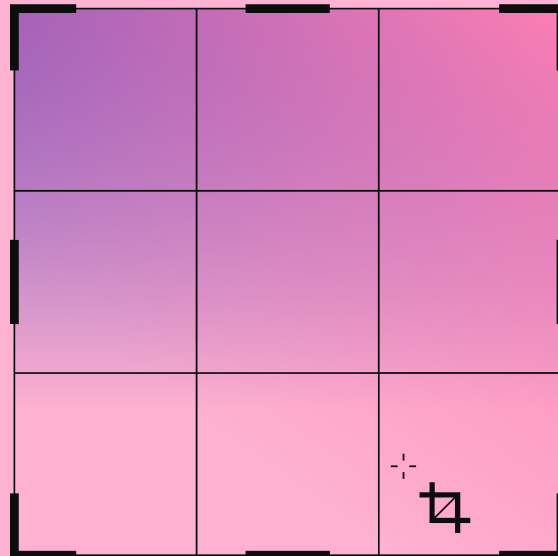

Key Elements Of Website Design

TOOLS & TECHNOLOGIES

Page 1

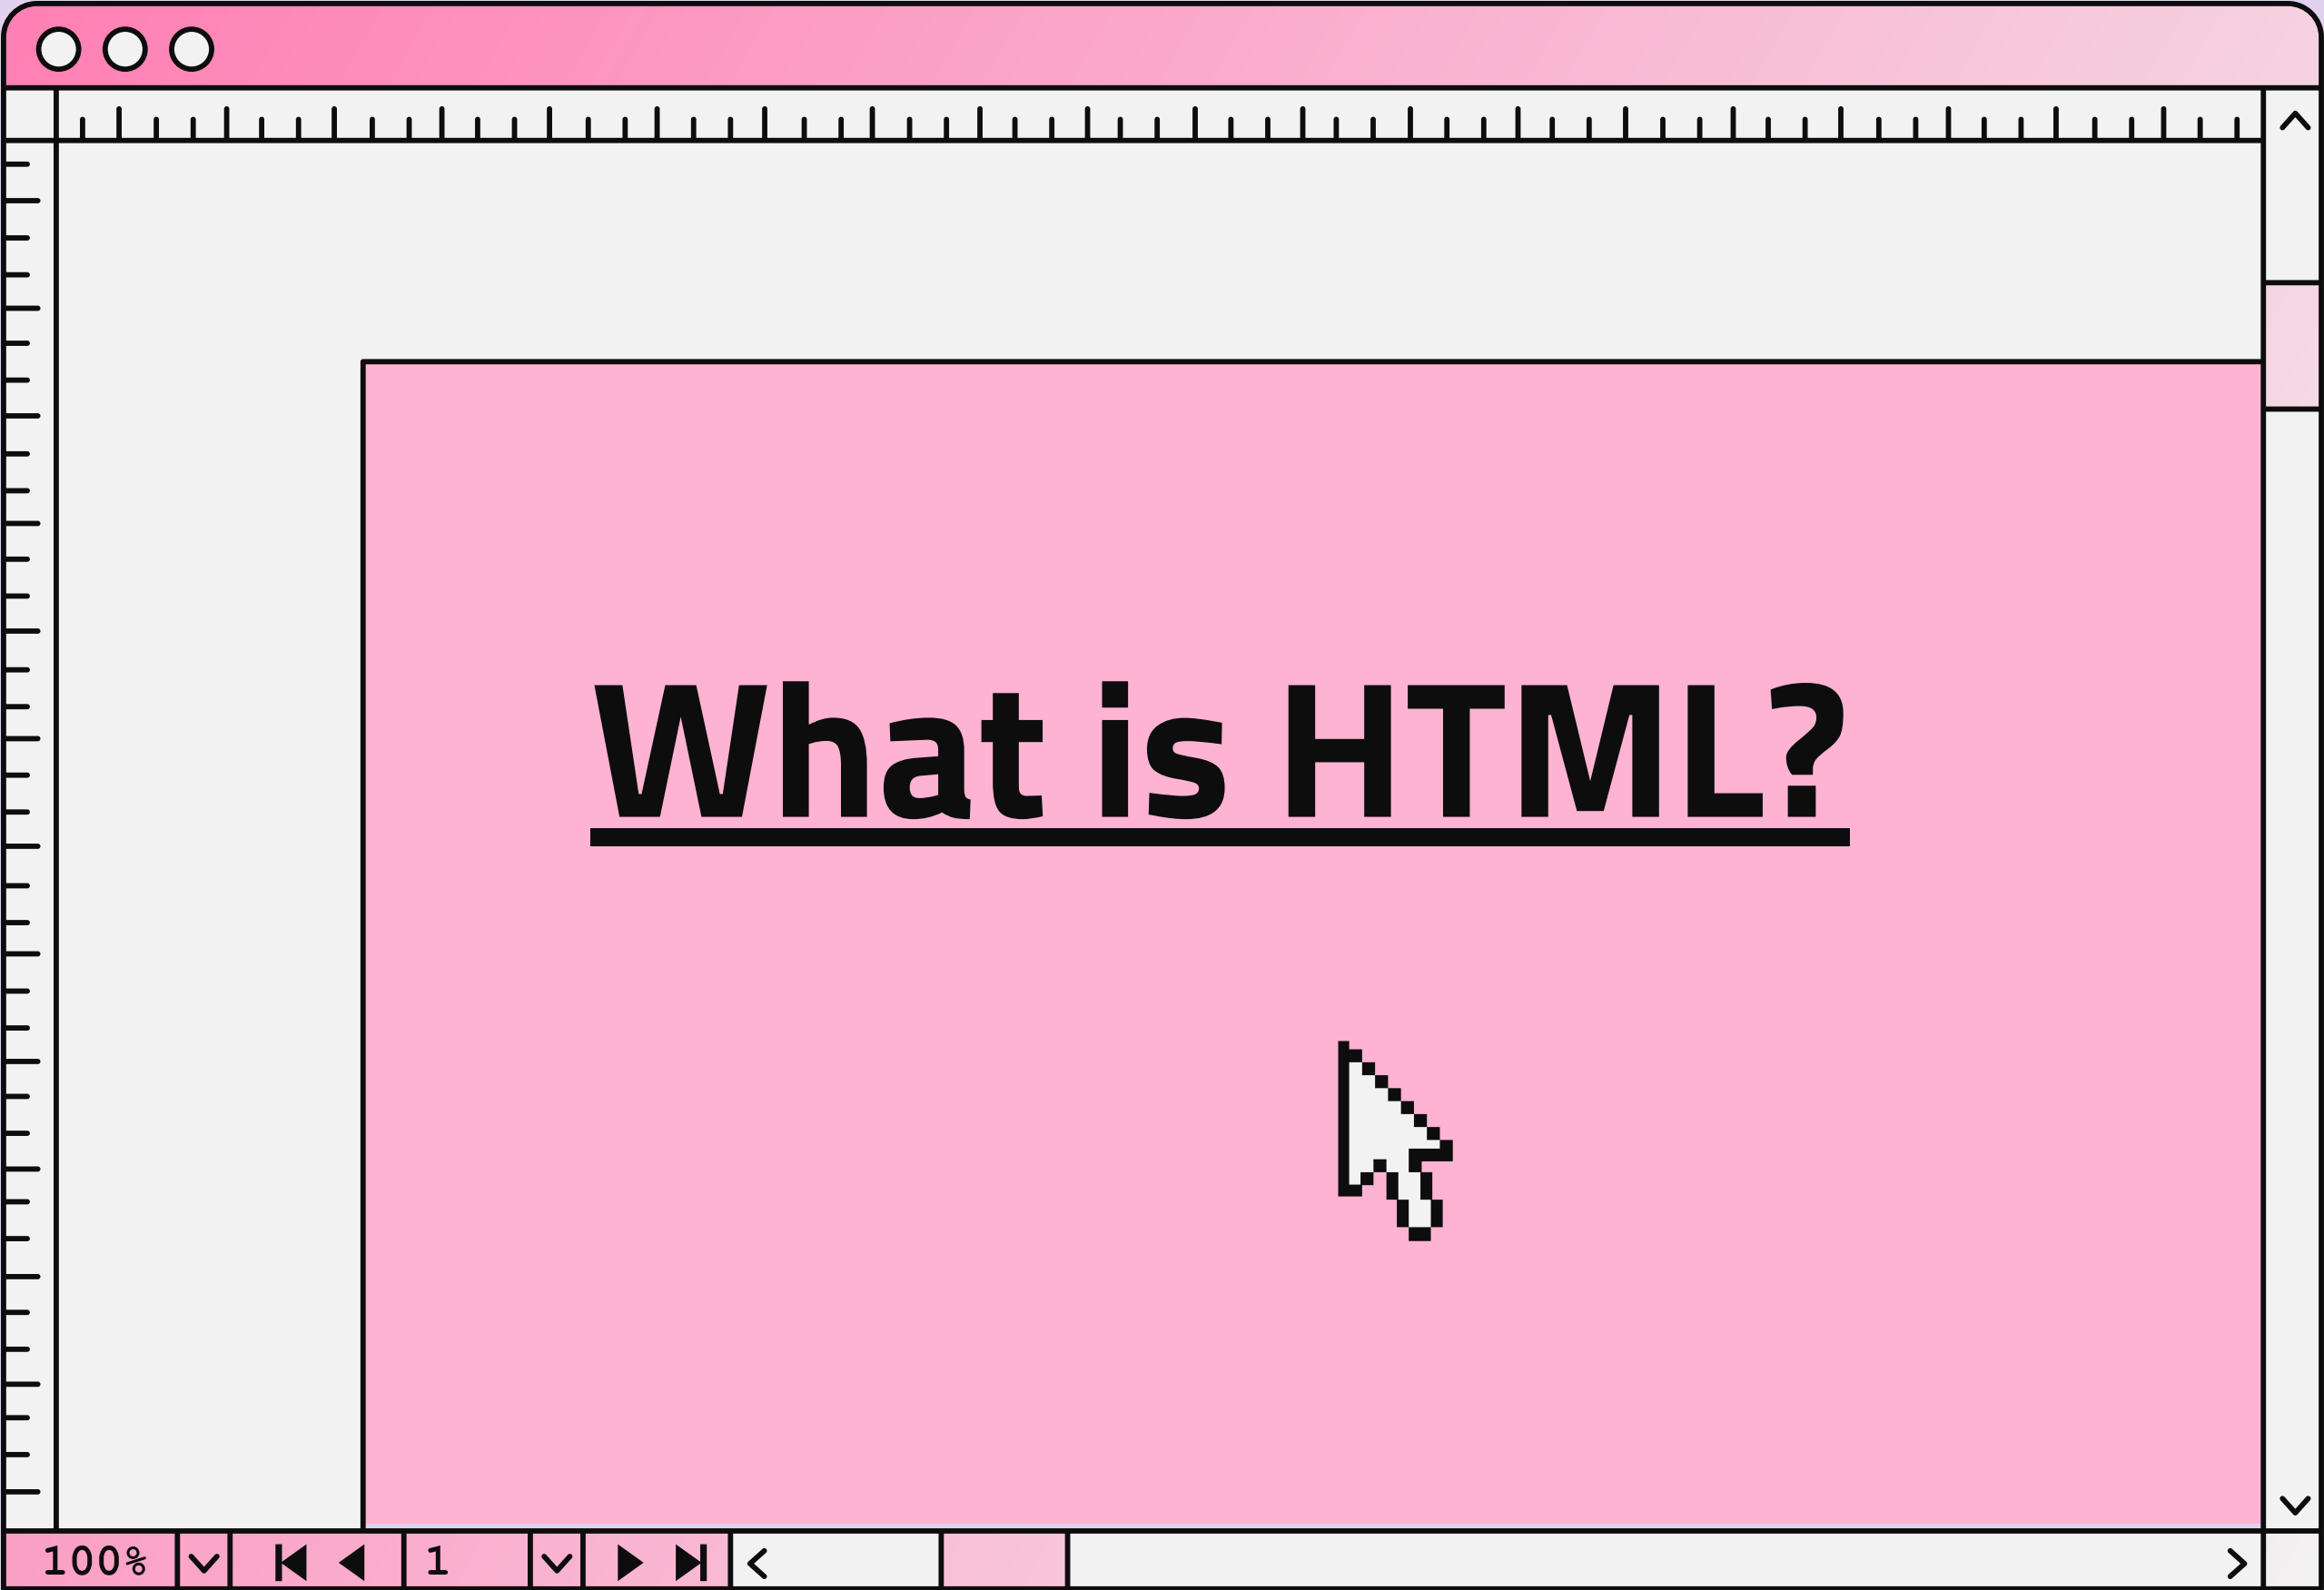

Words: 88

Websites design
is mainly done
using:

- HTML- Structure
- CSS- Styling

What is HTML?

Hyper Text Markup Language

Standard language used to create the structure of web pages.

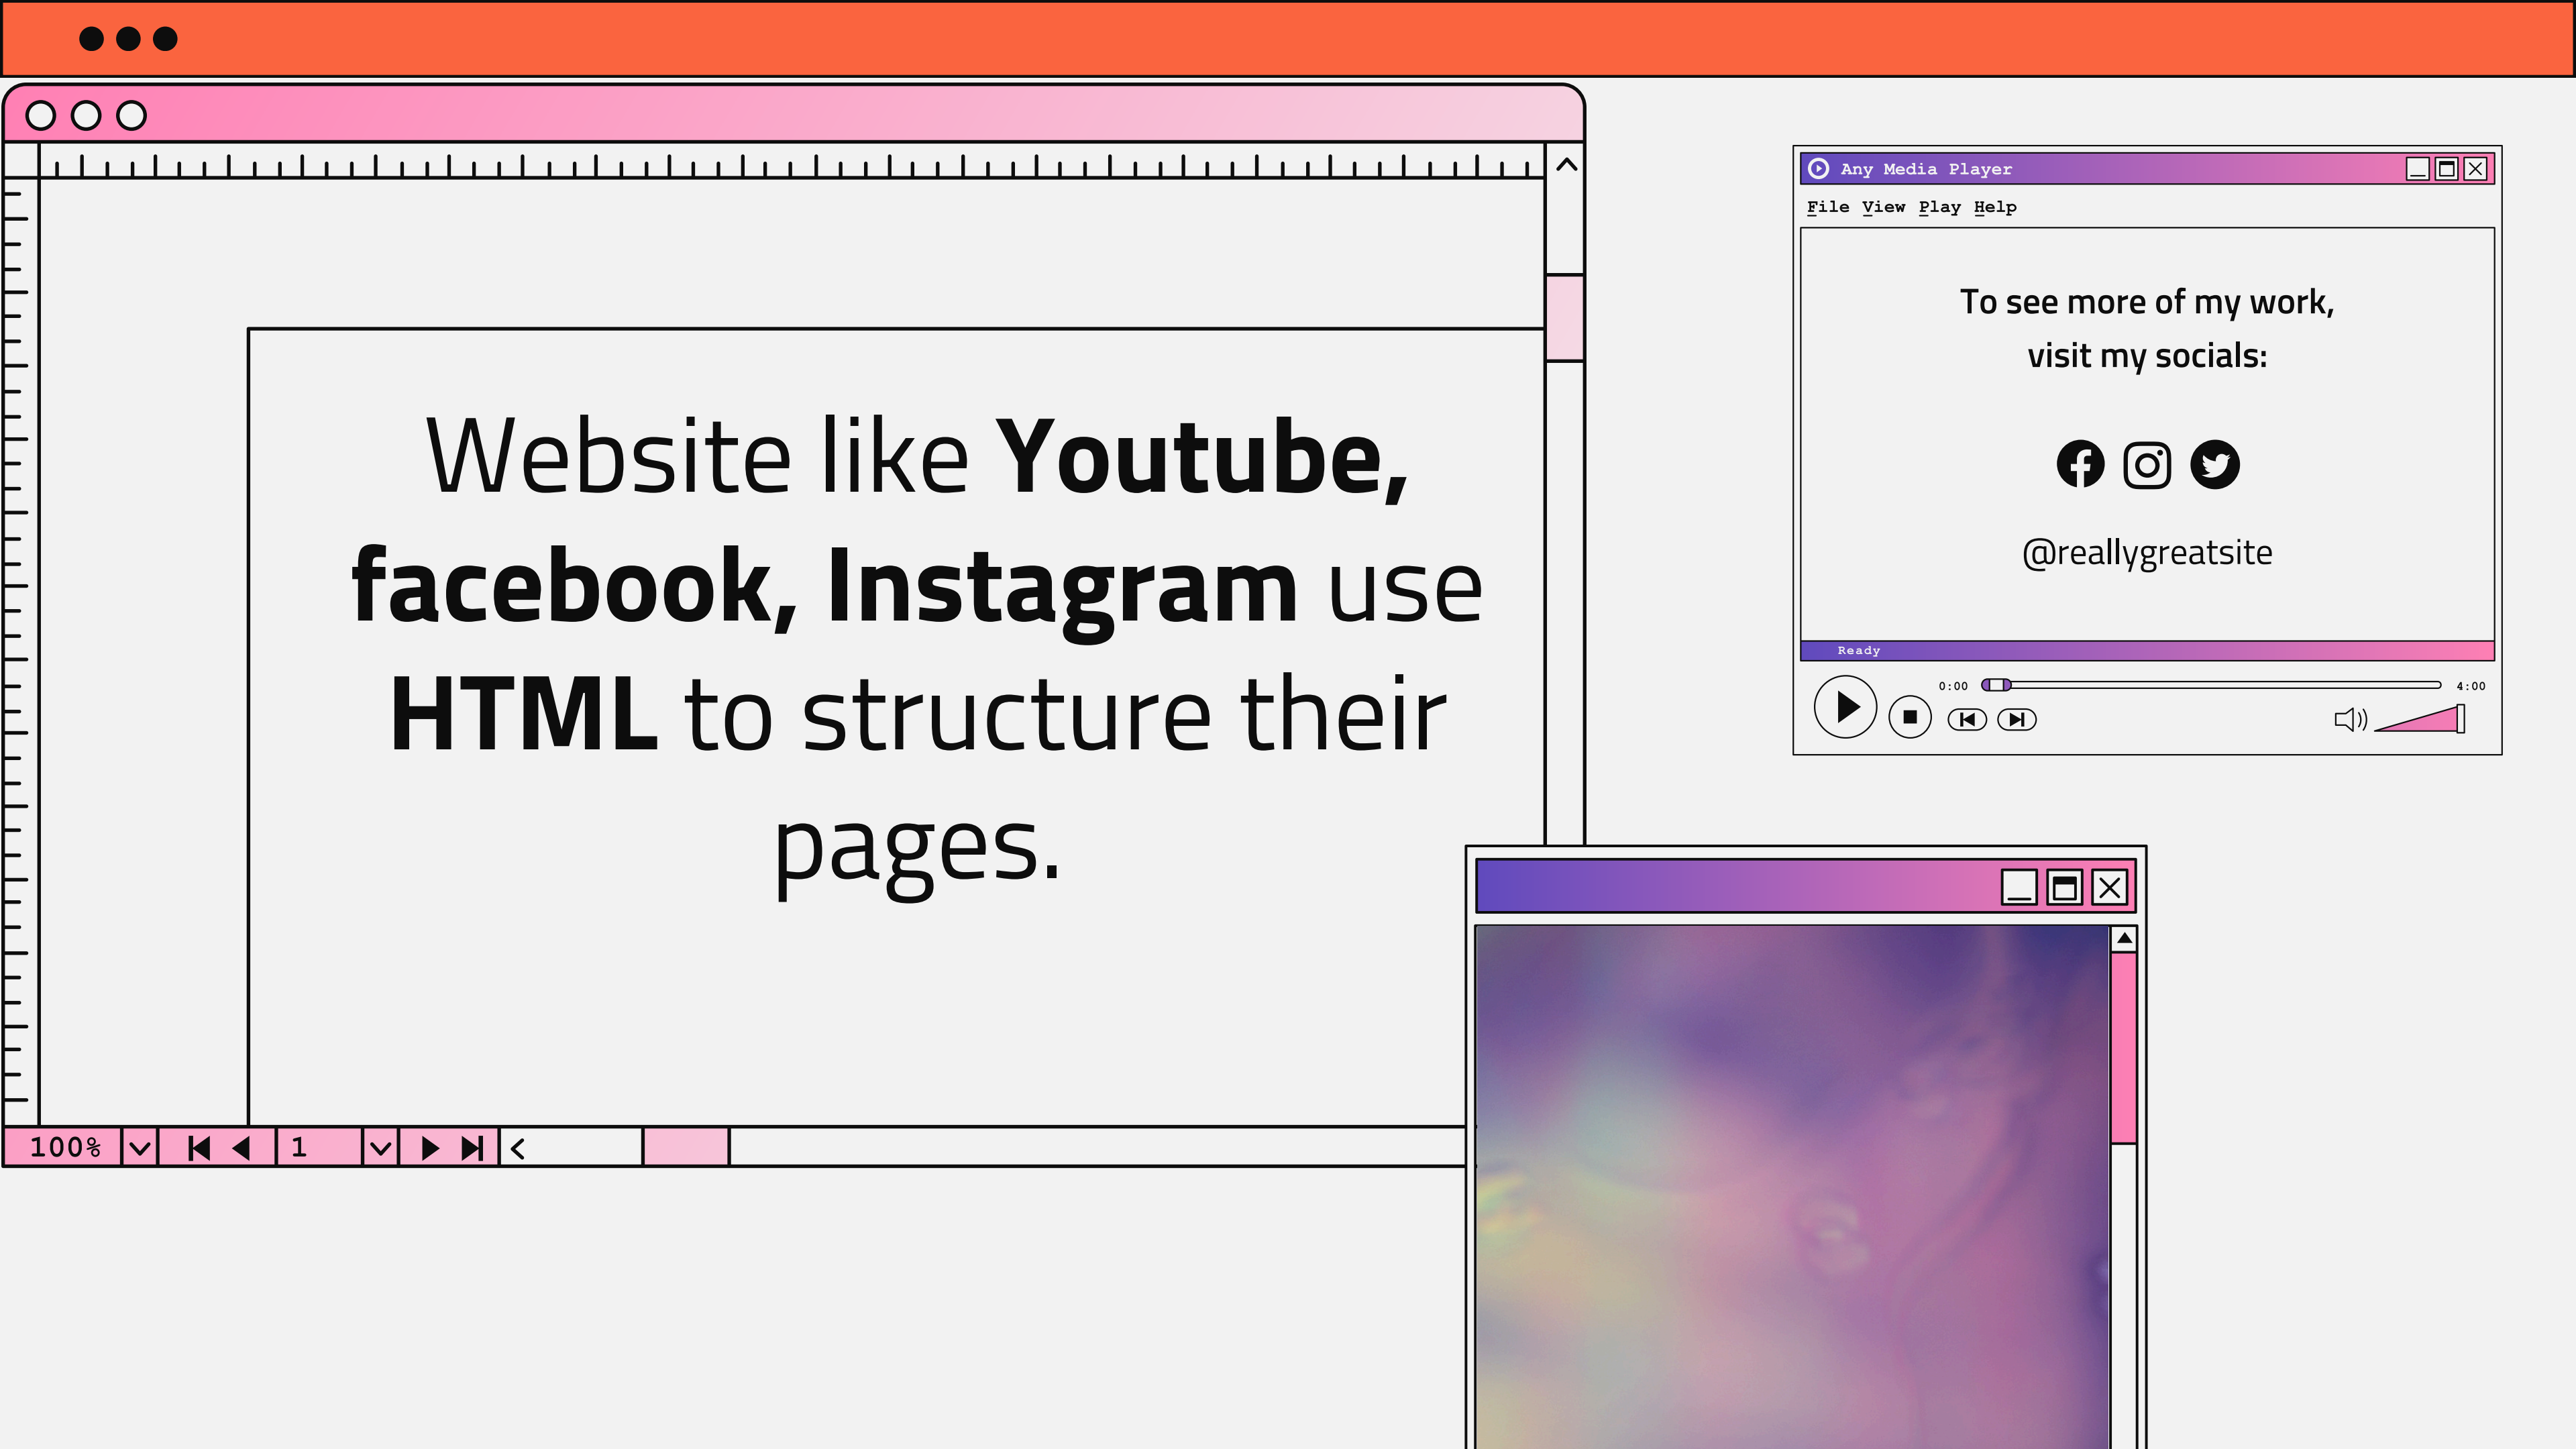

- It defines content (text, images, links, headings)
- Uses tags like `<h1>`, `<p>`, `<img>`
- It is the skeleton of a website

Example:-

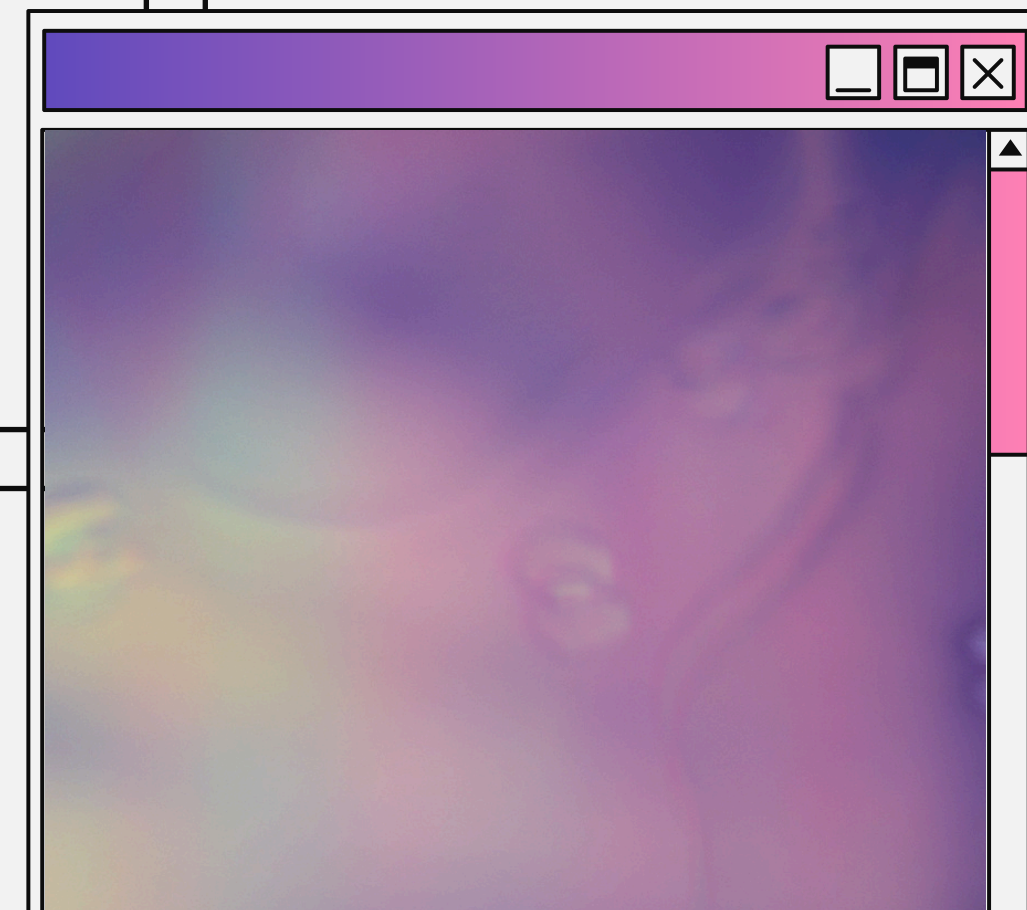

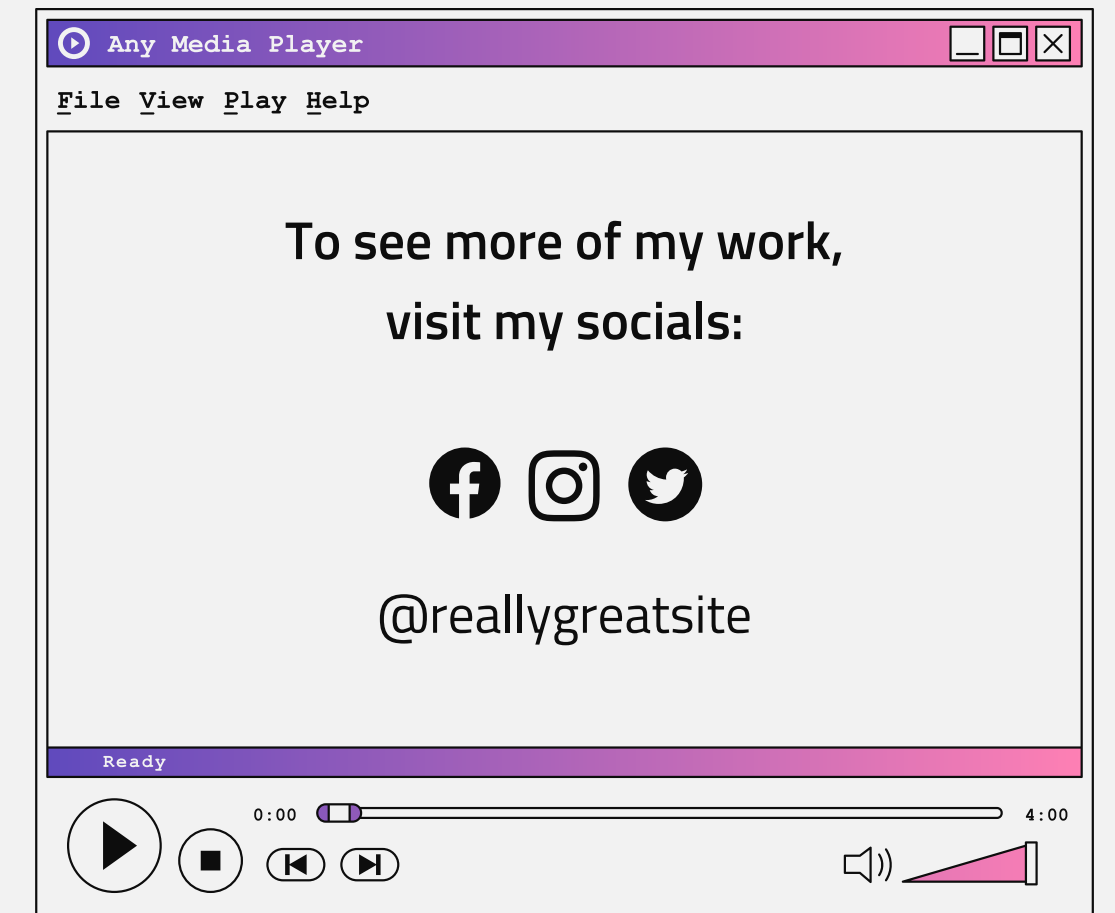

HTML

```
<h1>WELCOME</h1>
```

```
<P>This is a webpage</p>
```

Website like Youtube,
facebook, Instagram use
HTML to structure their
pages.

What is CCS?

CSS (Cascading Style Sheets) is used to **design and style web pages.**

KEY POINTS

- Adds **colors, fonts, spacing , layout**
- Makes websites look **attractive and responsive**
- works together with **HTML**

CSS

```
h1{color:blue;}  
p{font-size:18px;}
```

HTML+CSS Together

- HTML= **structure (what you see)**
- CSS= **Design (how it looks)**

Why are they important?

- **Used to create websites**

- **Essential for web design and UI/UX**

- **First step to becoming a frontend developer**

Conclusion:-

HTML builds the structure of a webpage, while CSS makes it beautiful and user-friendly. Together, they create modern websites

Thank
you!
